

Adding new Font files

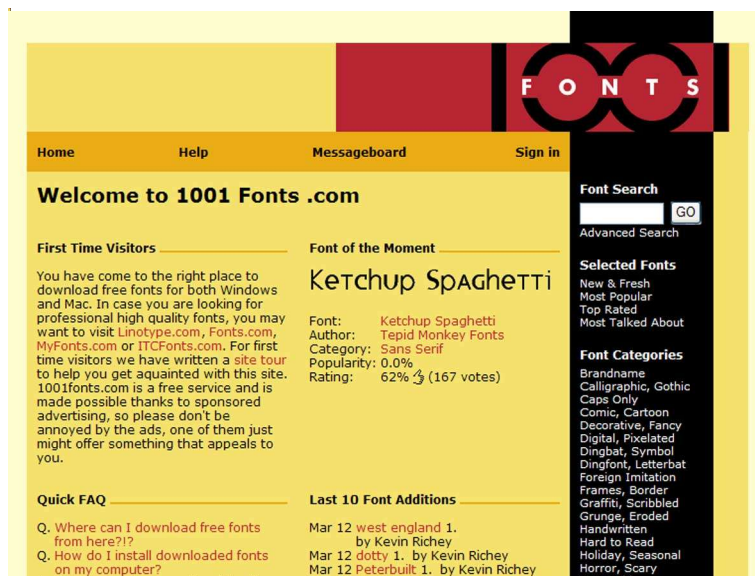

Additional fonts are available for use on your computer and therefore in your AV sequences.

Many fonts are available at no cost, from the Internet. Two websites offering many fonts are:

www.1001freefonts.com

www.1001fonts.com

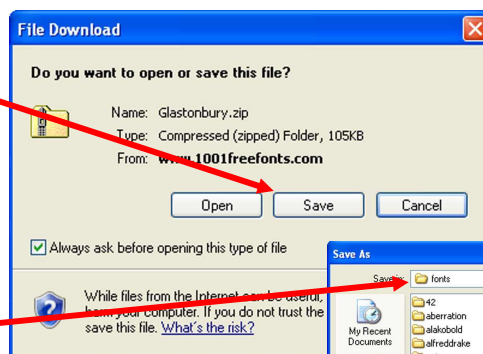

When you have found a font you like the look of, you need to download it to your computer.

Click on the appropriate 'download'

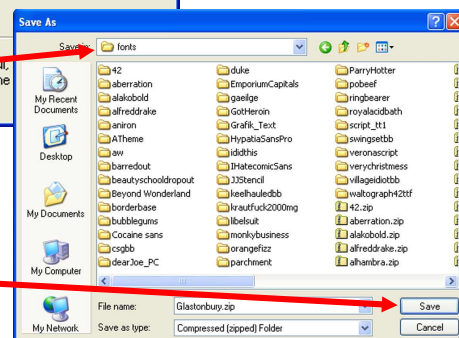

Save the file to a dedicated folder.

For example, on my PC I have created a folder in 'My Documents' called 'Downloads' and within that a folder called 'Fonts'.

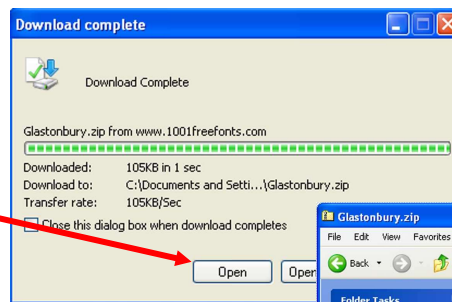

Navigate to your chosen folder

...and Save the file

The new font will have been downloaded as a Zip file. This has to be 'un-zipped' before you can use it.

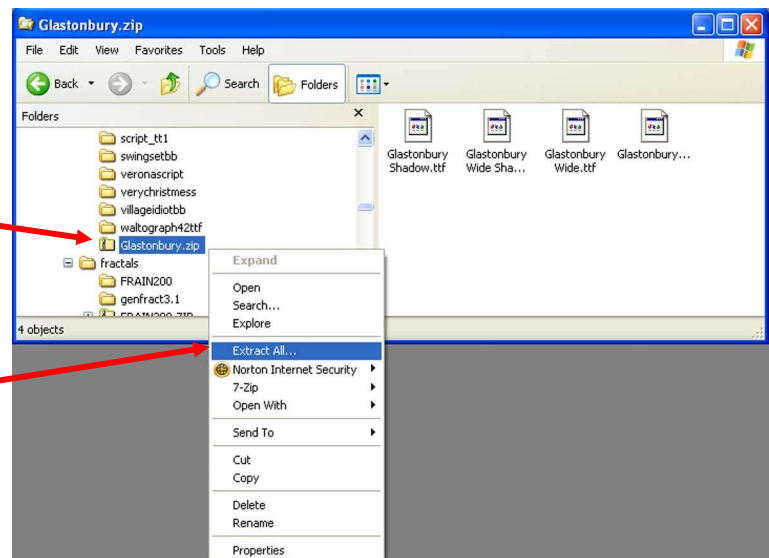

Open the file

..and Extract all files

... or if you get past this stage, find the file that you have just downloaded in your chosen folder.

Right click on the folder and

... Extract all

This will take you into a simple 'Wizard',

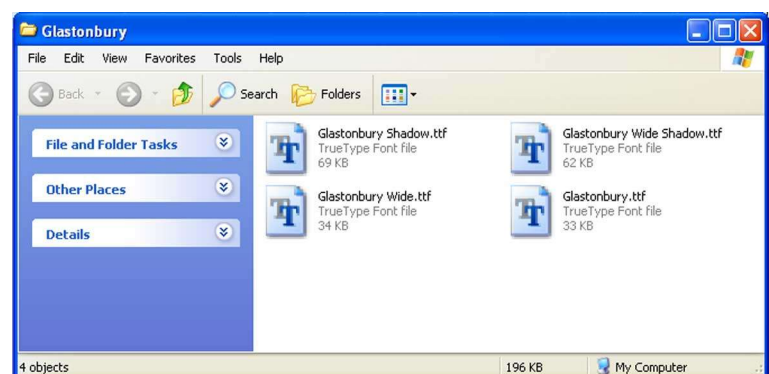

Unless you know better, just click

Next

Next

Finish

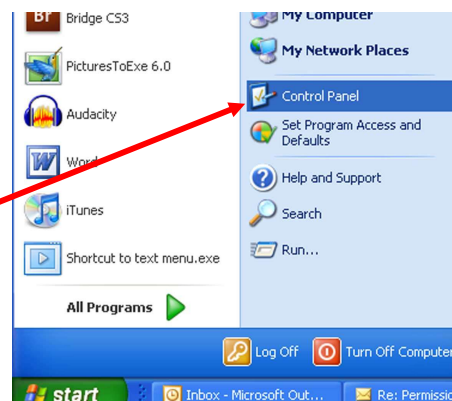

And you will get a new folder in the same directory folder, containing the unzipped files

The font files are now downloaded, unzipped and on your computer. However the computer now needs to be told to use these new fonts.

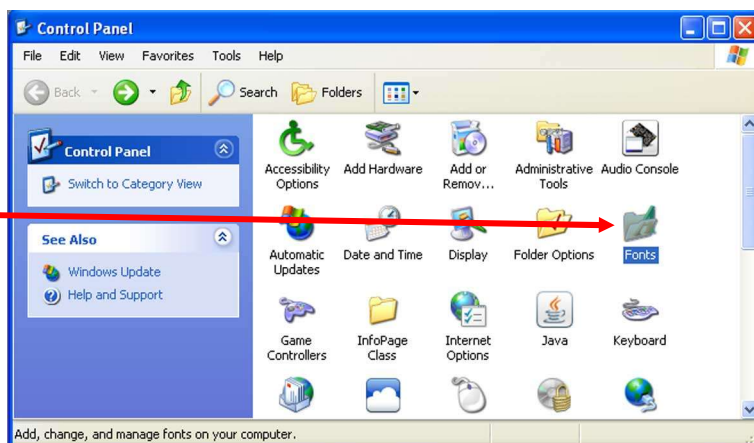

Open the control panel

..by clicking on the start button and then on Control Panel

The Control panel may open in Classic View, as shown alongside.

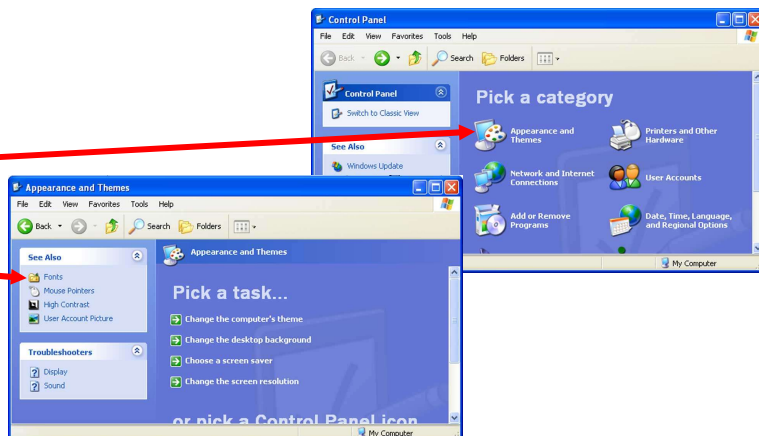

Find the Fonts option and click

Alternatively, the Control Panel may open in Category view.

Click on 'Appearance and Themes'

And then, under 'See also' click on Fonts

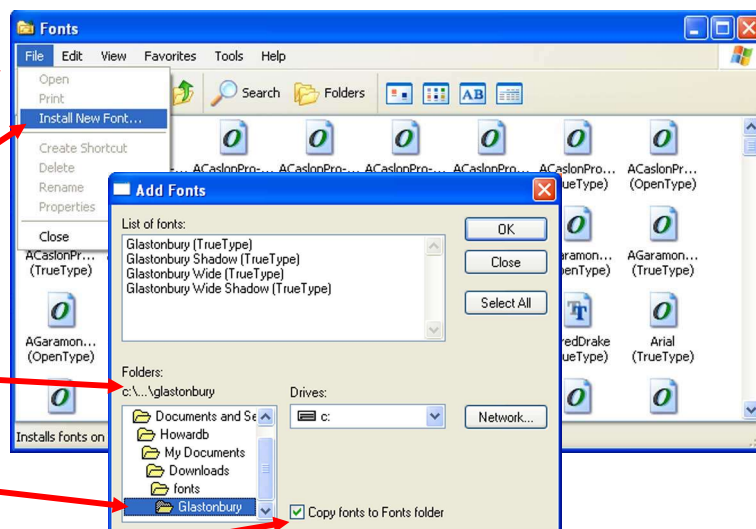

A Fonts folder will open.

Click on File

...and then Install New Font...

In the dialogue box, navigate to your download folder

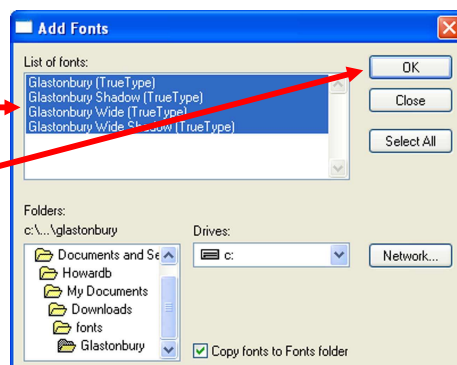

...and find the folder containing your new font

Make sure this box is ticked

If more than one font is available, chose all of them or make a selection (highlight in blue).

Then click OK

Your new font should now be available in Photoshop, PTE and all other text applications
